Outline

- Introduction
- Features
- Database model
- Project overview

Introduction

This is a framework/database programmed in Python2.7 language based on a **TurboGears** framework.

It uses:

- RDKit
- TurboGears
- JSME editor
- Postgresql
- Genshi

And some python based libraries:

- SQLAlchemy
- razi
- Numpy
- Scipy
- Matplotlib
- Xlwt & Xlrd
- xhtml2pdf
- pillow

Design goal

- Project management tool
- Efficient data storage
- Sorting, analysis, aggregation and reporting of data
- Data visualization
- Improved data access
- Automation of procedures
- Facilitate communication

Features

- Multi-projects
- Adding molecules by drawing or pasting SMILES code
- Reading molecules from file (csv, smi, sdf, txt, mol)
- Data presenting in sortable columns
- Exporting data to file (file formats: xls, pdf, csv, sdf, txt, png)
- PAINS (Pan Assay Interference Compounds) filtering
- History of changes
- Compound filtering (by similarity, structure, identity, compound name, creator, adding date etc.)
- Stars rating
- IC₅₀ determination based on least squares method,
- Automatic data processing
- Graphs generation
- Access managing
- Tags

Conditions & Source code

Least-square fitting (leastsq) example

Fit a model to noisy data:

$$y = a/x^b \sin(cx) + \epsilon$$

log(inhibitor) vs. response -- Variable slope

Model:
$$Y = Bottom + \frac{Top - Bottom}{1 + 10^{(logIC50 - X) * Hillslope}}$$
